Receive Patient-Centered Care at Penn Medicine

You may know Penn Medicine best for its hospitals. But did you know that in addition to those and over 50 outpatient locations, Penn Medicine has 10 multi-specialty centers around the region? These centers allow patients and their families to see their primary care provider, consult with a specialist, and get lab work, radiology, and pharmacy services all in one place. Visiting one is an easy choice for more coordinated and convenient care.

Every location offers different medical specialties, but in general, you'll see services and programs like:

- Cardiology
- Neurology
- Primary Care
- Neurosurgery
- Orthopaedics
- Physical Therapy

For more information on the 10 multi-specialty locations, and the specialties available at each, visit our special webpage by [clicking here](#).

Price Protection Wherever You Go

Our provider partners help you get quality care without overpaying. This includes access to care from our featured partner, Penn Medicine, but also an additional 2,900+ primary care physicians and specialists.

Need to see a provider who is not an Imagine partner? We'll review your claims to make sure you pay a fair, reasonable price for care, wherever you go. If a provider ever bills you for more than your plan's allowable claim limits, just call the number on your benefits ID card.
